

Appendix 1

EBLICT products and resources Using Guideline

1. Any developed products and resources such as software, AI models, Datasets, technical documents, and audio-visuials must be the sole property of BCC, ICT Division. BCC reserves the right to distribute the products and resources and thus execute any listenership.
2. Initially, license-defining rights are assigned to the EBLICT project and after completion of the project, these will be transferred to BCC. Currently, all decisions will be taken by EC of Project and after completion, it will be performed by a committee formed by ED, BCC.
3. If any external party requests to use the EBLICT product/service, dataset, or any other resources they must use branding icons and acknowledgment notes mentioning EBLICT (www.bangla.gov.bd), BCC (www.bcc.gov.bd). However, for a specific purpose, the following conditions should be fulfilled:
 - I. There should be have component/product logo i.e., the Shothik spell checker in the client app if any third-party client app wants to connect through API.
 - II. If any external person or party, internal consultant firm, or individual of EBLCIT wants to use datasets, models, infra (server, GPU), API, web application, stand-alone app, technical guideline, audio-visual properties for the purpose of research paper writing, the must acknowledge EBLICT, BCC name clearly and the permission modality. The modality will be defined by license which will be mentioned in the release notes.
 - III. For internally developed products, names, links, and logos of components, projects, governing organizations and divisions should be mentioned. Here, Internal means consulting firm of individual consultants.
4. Project resources will be tagged as closed, privately open source. The project reserves the right to make some of the resources 'closed' due to business secrets and thus revenue earning. Some resources could be shared for research or revenue earning purposes privately keeping conditions/restrictions. Other resources will be released as open source. When a specific resource is declared open source that means it will be publicly available. However, redistribution of the resources will be defined by the licenses of that specific resource.
5. All products and resources can be distributed only under a license agreement.
6. There are several types of licenses that can be entitled to EBLICT resources as follows:
proprietary , CC by 4, GPL 2.0, BSD
7. The resource can be exchanged by some agreement such as
 - a. Research Collaboration with Universities and Govt agencies
 - b. Using Service through MoU or contract as per service charter approved by Finance Division.
 - c. Request for Dataset and model evaluation for research purposes by electronic form defined by project.
 - d. For any type of use, explicit acknowledgment of BCC should be addressed.

Appendix 2

Tariff Charter for EBLICT Services

The services of the EBLICT could be divided into some categories for financial/billing purposes. The features of the service categories are given below:

Free Public single user: No charge, Single user no registration required, uses chunk might be limited and some features might be restricted.

Free registered user: No charge, Single user with registration, uses chunk might be limited and some features might be restricted.

Pro public single user: Charge applied, Single user with registration, uses chunk might be higher and some features might be open.

Pro bulk team user: Charge might be applied or not, multiple concurrent users from internal client application having team registration, uses chunk might be higher and some features might be open.

Pro bulk govt user: Charge might be applied or not, multiple concurrent users from external client application, uses chunk might be higher and some features might be open.

Pro bulk commercial user: Different Charges might be applied or not, multiple concurrent users from external client applications, uses chunk might be higher and some features might be open.

Free Researcher Credit: No charge, Single users with special category registration, uses chunk might be limited and some features might be open.

A system should be developed under SD19 to execute the billing plan. The system should count the request and apply the charge as per client's requirement. The charge, uses time/chunk, features, and services must be configurable through GUI easily.

For end-users through a self-developed client app, all services of the EBLICT will be served free of cost. However, some pro services could require monetary value. The following services will be charged for:

Service Name	EBLICT Client APP/ API Testing Pack/ Gen Subscription	API to External App: Pro1 Pack	API to External App: Pro2 Pack	Subscription Pro1 Pack	Subscription Pro2 Pack
	Per Req/Per User/ Per IP	Per Request	Per Request	Per User or IP	Per User or IP
OCR	Free	.49/ Image	.79/Image	160 taka/month	300 taka/month
Spell	Free	.49/ Chunk	.79/ Chunk	160 taka/month	300 taka/month
